Nist chemistry webbook. Nist chemistry workbook. Nist chemistry book. Nist chemistry webbook download.

The NIST Chemistry WebBook offers extensive data compiled by the National Institute of Standards and Technology under its Standard Reference Data Program. It contains a vast array of thermochemical, spectral, and ion energetics data for over 70,000 compounds, including information on reaction thermochemistry, mass spectra, UV/Vis spectra, gas chromatography data, and more. The database features various properties such as enthalpy of formation, heat capacity, entropy, phase transition enthalpies, vapor pressure, and thermophysical properties of 74 fluids. Users can search for specific compounds based on name, chemical formula, CAS registry number, molecular weight, or selected ion energetics and spectral properties. Although NIST strives to deliver high-quality data, the organization does not make any warranties regarding the accuracy of its database. Therefore, users should be cautious when relying on this information. The Chemistry WebBook is a valuable resource for researchers and professionals in the field of chemistry, but users are advised to verify the data through other credible sources whenever possible. The NIST Chemistry WebBook was launched in 1996 and has since grown into a comprehensive resource covering various types of chemical data. The site features thermochemical, ion energetics, solubility, and spectroscopic data, including enthalpies of phase transitions, heat capacities, and reaction entropies. To ensure the accuracy of the data, automated tools are used to verify the information before it's added to the website. The site provides extensive coverage of literature in its respective fields, accompanied by relevant metadata like experiment types or important auxiliary data. This feature makes the WebBook an excellent tool for evaluating data. The primary goal was to provide convenient access to all types of chemical data, overcoming challenges in displaying chemical data on the Internet. The next phase will focus on developing tools to aid researchers in retrieving data from the site. Data from the WebBook has been applied in industrial, research, and educational settings, with usage patterns for the site being discussed.
